What's New:

Sage 200 Evolution
Version 10

sage

Content:

Microsoft Azure SQL Database

Version 10 of Sage 200 Evolution can host an Evolution Master and Common database in Microsoft Azure SQL .

On the Locate Database wizard, point the SQL Server name to the instance set up in Azure using SQL Authentication.

An option is available to use a secure connection to the SQL database.

Microsoft SQL 2017

The default SQL Server on the installation is now SQL 2017.

Direct Banking Integration(South Africa Only)

The Global Banking offering from Sage has been integrated into Sage 200 Evolution.
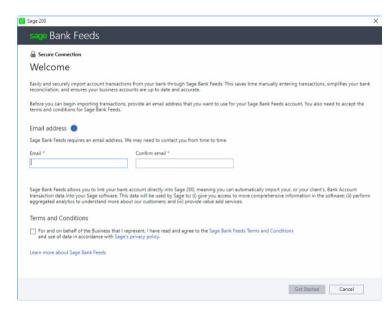

As a first iteration, a direct integration to download statements have been implemented with ABSA.

Using the Bank Manager module, Sage 200 Evolution will download the statement information directly into Bank Manager.

Direct Banking Integration...continued

Each Bank Account can be set up for Bank Feeds.

Inter Branch Transfers

IBT Requisitions are enhanced to allow requisitions from within the same branch.

On the Requisition lines, an option is available to see all the quantities for the warehouse where stock is requisitioned from.

All the warehouse quantity fields are visible on a new form called Stock Levels. Select this button on the Requisition form.

The fields that it will display includes:
Qty Required
Qty Available
Qty on Hand
Qty on SO
Qty on PO
Qty JC WIP
Qty MF WIP
Qty IBT to Issue
Qty IBT to Receive

On the Synchronisation Monitor, IBT's that are processed will be part of the syncrhonisation, unprocessed IBT's are excluded.

Source Document Layouts

The default source document layouts have been changed to use the text for the tax number as 'VAT Number'.

Registration

The pin number for Version 10 have been changed and a re-registration is required.
